SUMMARY OF TABLES.

In 1898 there were received 33,915 applications for patents, 1,843 applications for designs, 84 applications for reissues, 1,659 applications for registration of trade-marks, 316 applications for registration of labels, and 50 applications for prints. There were 22,207 patents granted, including designs, 60 patents reissued, 1,238 trade-marks registered, and 200 labels and 35 prints. The number of patents that expired was 15,548. The number of allowed applications awaiting the payment of final fees was 6,824. The

number that were forfeited for non-payment of the final fees was 4,363. The total expenditures were \$1,136,196.20. The receipts over expenditures were \$1,538.28. The total balance to the credit of the Patent Office in the Treasury of the United States on January 1, 1899, was \$4,972,976.34.  
In proportion to population more patents were issued to citizens of Connecticut than to those of any other State—1 to every 933 inhabitants. Next in order are the following: Massachusetts, 1 to every 1,428; Rhode Island, 1 to every 1,584; New Jersey, 1 to every 1,594; District of Columbia, 1 to every

1,694; Montana, 1 to every 1,723; Oklahoma, 1 to every 1,819; New York, 1 to every 1,825; Colorado, 1 to every 1,865; California, 1 to every 1,951. The fewest patents granted in proportion to the number of inhabitants were in the following States: South Carolina, 1 to every 23,982; North Carolina, 1 to every 22,787; Mississippi, 1 to every 18,964; Alabama, 1 to every 18,914; and Georgia, 1 to every 17,333.

As to foreign countries, 964 patents were granted to residents of England; 634 to those of Germany; 345 to those of Canada; France, 258; Austria-Hungary, 75; Scotland, 64; Belgium, 47; Switzerland, 39; Victoria, 35; Italy and Russia, 33 each; Sweden, 32; New South Wales, 29; Ireland and New Zealand, 28 each; Denmark, 18; Netherlands, 17; Norway, 10; Mexico, 8; South African Republic, 7; Argentine Republic, South Australia, and Spain, 6 each; Cape Colony, Finland, India, and Queensland, 3 each; Brazil, Bermuda, and Tasmania, 2 each; and to Algeria, British Guiana, Burmah, Chile, Cuba, Egypt, Guatemala, Island of Tahiti, Jamaica, Portugal, Turkey, and West Australia, 1 each.

#### THE WORK OF THE OFFICE.

In entering upon the duties of this Office on February 5, 1898, I found that the work of the Office was largely in arrears. For years my predecessors had forcibly urged an increase in the number of Examiners and a slight increase in the clerical force. Realizing the absolute necessity for such increase, your immediate and favorable action was earnestly requested. Impressed with the justice of the plea of the inventors and manufacturers for a more prompt service, you gave the increase of force asked for, with the result that for the first time for at least ten years it is unnecessary for a Commissioner of Patents in his Annual Report to plead for an additional force.

The result has justified your action and my predictions. On December 28, 1897, 11,382 applications were awaiting action, and by March 15, 1898, the number of such applications had increased to 14,842. On December 27, 1898, the number of such applications had been reduced 5,915 from the number awaiting action December 28, 1897, and 9,375 from the number awaiting action March 15, 1898, so that only 5,467 applications were then awaiting action. Of this number only 2,999 were applications which had not received any action, as against 7,858 applications awaiting their first action on December 28, 1897, and 10,720 such applications awaiting action on March 15, 1898.

Many of the examining divisions on December 28, 1897, were from four to six months in arrears, while on December 27, 1898, only one division was in arrears over six weeks, and that division has since come within the six weeks limit, while all amended cases are taken up for action within fifteen days after amendments are filed. The condition of the examining work of the Office on the respective dates—December 28, 1897, and December 27, 1898—is best shown by the weekly reports of those dates:

THE EFFECT OF THE WAR UPON THE BUSINESS OF THE OFFICE.

It is but fair to state that one of the elements contributing to the reduction of the number of applications awaiting action at the close of the year was the falling off in the number of applications received during the last nine months of the year. This was owing largely to the war. The rank and file of our army was largely made up from the ranks from which, to a large extent, our inventors come. An examination of the records of the Office shows that the civil war brought about a similar very large reduction in the number of applications filed during that period. In 1860, 7,653 applications were filed, while in 1861 the number fell off about forty per cent., being only 4,643. It was not until in 1865 that the number of applications filed rose to and passed the figures of 1860. While the reduction in the number of new applications received during the past year has been a factor in bringing up the work of the Office, the fact must not be lost sight of that the increase in force was not available until in July, and that while no better equipped force of young men has entered the service of the Patent Office than the twenty-eight additional examiners who were added to the force last July, yet necessarily being new to the work, their efficiency for the first six months was much less than it will be from now on. That this is so is shown by the fact that at the time of presenting this report over one-third of the examining divisions are engaged in examining new cases filed less than one month ago. I cannot speak too highly of the interest taken by the examining corps in bringing up the arrears of work. When required, the examiners have cheerfully worked until five o'clock, and often later. There is not a more enthusiastic or loyal force in the employment of any branch of the Government service than is to be found in this Office.

The salaries paid to members of the examining corps are inadequate, and this is shown by the fact that every year more and more of the most efficient examiners resign.

The work of the clerical divisions is well in hand.

Assignments are recorded within fifteen days from their receipt ; copies of official records are furnished with promptness, and printed copies of specifications and drawings of patents, while, for reasons hereafter stated, are not furnished as promptly as should be, yet the delay is much less than before the addition to the number of our messenger-boys was granted.

THE CLASSIFICATION DIVISION.

For a number of years my predecessors urged an increase of force in order to establish a classification division. Such a division was authorized by the act of June 10, 1898. Preliminary to the establishing of the division reports were called for from the members of the examining corps, and their experience enabled them to make valuable and practical suggestions, which so far as possible will be utilized. The division has been established and placed in charge of a chief, to whom has been assigned a sufficient force to commence to revise and perfect a classification of all Letters Patents and printed publications in the United States Patent Office, which constitute the field of search in the examination as to novelty of the inventions for which applications for patents may be filed, and that force will be increased as rapidly as the best interests of the work in hand demand. The necessity for this work is manifest. It is a work of great magnitude, for the field of search is enormous ; over 620,000 United States patents have been issued, while the issue of foreign patents is approximately 1,200,000. Of this latter, as shown by the accompanying table, about twenty per cent. is not available for the use of the work in examination, for the reason that we are only furnished with the titles of that per cent. of the patents. However, sixty-one per cent. of the foreign patents referred to in the table are fully available for examination, being published in full, and with the exception of Finland and Portugal are accompanied by drawings. Sixteen and one-half per cent. are partially available for examination, being published in abstracts.

a and b. For notes to which these letters refer see table by periods.

The number of technical journals and scientific publications relating to the industrial arts from which searches, if they are to be complete, must be made is very large. As long as a preliminary search for novelty is to be made it is of vital importance that it should be thorough, but without a complete classification of the prior art as illustrated in patents and scientific publications it cannot be complete. In the annual report for the calendar year 1899 this Office will be able to submit in detail the system of classification adopted. As yet the work has not progressed far enough to enable us to determine the details of the best system to be adopted, in view of the force available for the work.

THE NEEDS OF THE PATENT OFFICE.

The most pressing need of this Office at the present time is for additional room. It is expected that in a few months some additional room will be placed at our disposal, but I seriously question whether such room as may become available and be assigned to the Patent Office will be adequate for the needs of the Office. Room sufficient for the use of the examining divisions may be provided, but as our records are rapidly accumulating, especially the printed copies of patents, it is manifest that it will require the entire Patent Office building, if sufficient and convenient room be had

for the use of the examining and clerical divisions and for the convenient and safe arrangement of our records.

At the present time the cost of furnishing printed copies of the specifications and drawings of patents is double what it would be were these copies conveniently and accessibly arranged, and without such arrangement the delay incident to furnishing these copies, by reason of their being scattered throughout all parts of the building, will continue. These copies should be furnished with the same promptness as a yard of cloth may be had at a store. The price charged for them is at least equal to their cost to us, and the purchaser is entitled to prompt service, which in many cases is of the utmost importance. Were room provided for the convenient and accessible storage of these copies a force smaller than that now employed would be sufficient to promptly fill all orders. The Patent Office is patiently waiting for the promised relief, and it is hoped that when the relief comes it will be found adequate, and that future reports will not reiterate oft-repeated demands for sufficient room to enable this Office to properly discharge its varied functions.

STENOGRAPHERS AND TYPE-WRITERS.

The next most urgent need is for skilled stenographers and type-writers. In numbers the clerical

force of this Office is about sufficient at the present time to perform the work required; but the trouble is that many of the clerks entered the service before stenography and type-writing became a necessity. For example, assignments have been recorded in longhand in this Office for years. Within the past few months experiments have been made with book type-writing machines which satisfactorily demonstrate that with these machines and skilled operators not only a smaller force can do all the work of recording and in a much more satisfactory manner, but what is also of moment in the crowded condition of the Office a saving of space required for the storage of the record-books of about forty per cent. could be made. Furthermore, every examining division should have at least one skilled stenographer and type-writer, and all copies of Office records should be type-written. Notwithstanding the technical nature of a large part of the work required of stenographers and type-writers in this Office, Commissioners have tried in vain to induce Congress to pay our copyists the same salaries paid in other departmental offices. Many of our copyists receive only \$720 for the same service for which copyists in other departmental offices receive \$900. The expected results from this: After a few months' service in our Office many of our best stenographers and type-writers are enabled to secure transfers to offices where the smallest salary paid to copyists is \$900. The position of training-school is not enviable, and it is not just to this Office to so adjust salaries that that result must necessarily follow.

#### SCIENTIFIC LIBRARY.

The value of this library has been repeatedly and forcibly set forth by my predecessors. The annual appropriation for this library has for years been inadequate. I have submitted a proposition to Congress which if favorably acted upon will materially strengthen the condition of the library without requiring any additional expenditure of money. Authority has been asked to dispose of such works in the library as are not necessary for the work of the office, with permission to use the avails thereof in the purchase of modern works. It is hoped that this authority will be granted.

#### ALPHABETICAL LIST OF PATENTS FROM 1790 TO 1873.

For several years this Office has contemplated publishing a general index or alphabetical list of patentees from 1790 to 1873 as a companion to the Subject-Matter Index of Patents for Inventions from 1790 to 1873, hitherto published, and which, with the annual indexes published since the latter date, will complete the alphabetical list of all persons who have obtained patents since the foundation of the Government. Most of the matter necessary for the production of this work has been prepared and is ready for the printer. There is an urgent demand for the work, and if the index could be printed by contract the money received would pay the cost of printing it, but when we are compelled to have this work done by the Government

Printing Office the estimate of cost is so great that I cannot in justice to the Patent Office bring myself to the point of asking an appropriation for the purpose. The estimate of the Government Printing Office for doing this work is over \$32,000, while the estimates furnished by responsible parties show that by contract this work could be done for about one-half of that sum. I ask authority to have this work done by contract. In this connection I desire to call attention to the fact that this office annually pays to the Government Printing Office between \$250,000 and \$300,000 for printing and binding. This work could be done by contract for a sum not exceeding \$200,000, and I cannot but feel that this saving ought to be made. The printing and binding for this office should be done by contract in Union offices.

#### DESIRED LEGISLATION.

The following amendments to the patent and trade-mark laws are recommended:

1. An amendment providing for the appointment of Commissioner and Assistant Commissioner of Patents for a stated term, which should not be less than six years.

The duties they are called upon to perform are largely judicial in character. The Supreme Court of the United States in the recent case of *United States, ex rel. Alfred L. Bernardin, v. Charles H. Duell, Commissioner of Patents*, said:

Now, in deciding whether a patent shall issue or not, the Commissioner acts on evidence, finds the facts, applies the law, and decides questions affecting not only public but private interests; and so as to reissue, or extension, or on interference between contesting claimants; and in all this he exercises judicial functions.

A definite term will give a stability to the Office practice which is sadly needed. Since 1870 there have been fourteen Commissioners, or, in other words, a new Commissioner about every two years.

2. An amendment to limit the life of all patents so that they shall expire not later than twenty years after the applications for the same are filed.

At the present time it is possible to keep applications alive for an indefinite number of years. That this practice does not promote the progress of invention is self-evident.

3. An amendment permitting aliens to file caveats.

By so doing we may hope to receive certain important concessions from some foreign countries.

4. An amendment providing for the publication of 3,000 copies of the OFFICIAL GAZETTE of the Patent Office to be apportioned among Senators and Representatives in Congress, by them to be distributed among manufacturers and mechanics.

At the present time 7,000 copies of the OFFICIAL GAZETTE are printed, and it is believed that 3,000 additional copies can be furnished for a sum very little in excess of that now paid for the 7,000 copies.

5. A statute to provide for the registration of trade-marks used in interstate commerce.

I am informed that the commission appointed by the President on July 7 last, under the act approved June 4, 1898, "to revise the statutes relating to patents, trade and other marks, and trade and commercial names," which consists of Judge Peter

S. Grosseup, Hon. A. P. Greeley, and Mr. Francis Forbes, will in connection with their report to your honorable bodies submit a proposed trade-mark law which will provide for the registration of trade-marks used in interstate commerce. I cannot commend that feature too strongly and trust that the act when introduced will receive immediate and favorable action.

6. An amendment providing a fee of five dollars for petitions in interlocutory proceedings to the Commissioner of Patents.

Other amendments will hereafter be suggested; but in view of the lateness of the session no good purpose would be subserved by extending this report, and therefore they are omitted.

THE REASONABLE REQUESTS OF INVENTORS AND MANUFACTURERS SHOULD BE HEEDED.

When it is remembered that this Office is more than self-sustaining and that American inventive genius has cheapened the cost of production to the advantage of American wages, it seems as though the legislative branch of the government has done very little to encourage the useful arts and the inventors of the country. At the present time, when our manufacturers are reaching out for foreign markets, I believe no greater aid can be given them than by fostering and stimulating invention. The United States can only become dominant in the markets of the world through labor-saving inventions which will enable it to compete with the lower wages paid to the so-called working classes in other countries. The greatest development in American exports must be in the direction of increase in the export of manufactures. I assert, without fear of successful contradiction, that we mainly owe to our patent system such foothold as we have gained during the past fifty years in foreign lands for our manufactured products. We can, by a fair and liberal treatment of our inventors, control for our manufacturers not only our home markets but the markets of the world. In the words of a recognized authority, "In labor-saving machinery and in the intelligence of the labor employed, the United States to-day is in advance of the world." Most labor-saving machinery perfected within the last seventy-five years is the invention of our own people. The reaping-machine, which from 1861 to

1865 did the work of more than a million men working with hand implements, is of American origin. The same is true of the modern plow and its added improvements, of the corn-planter, and the threshing and separator machines. In the textile industry the American record surpasses that of all other countries. Wool-carding machinery owes its chief improvement to the invention of John Goulding, whose patent was issued in 1826, which dispensed with the splicing-billy, and produced the endless roll or sliver. The Crompton loom for weaving fancy woollens and the Bigelow loom for weaving carpets are of American invention. It is not alone by fundamental inventions that our inventors have revolutionized in so many respects the textile industry. Not the less have their inventions in automatic devices, in expediting processes, and in many steps dispensing with hand-labor assisted in placing this country in the front ranks in the textile art. Another marked illustration is found in the steel industry, where the reduction in manual labor has enabled our manufacturers to successfully compete with foreign nations. American electrical appliances command the world's markets. This subject is somewhat trite, and I have only referred to a few well-known historic facts for the purpose of emphasizing the advantages that will certainly flow from recognizing the just claims of our inventors. Let us not forget that it is the American inventors who by their inventions and discoveries "have made the last fifty years of the nineteenth century the most remarkable of recorded time" and at the same time have laid the civilized world under tribute to American manufactures.

In return for all this our inventors only ask a fair field and fair treatment. They only ask that the money paid into the Treasury by them shall be used, so far as necessary, for the purpose of providing necessary facilities for prompt and intelligent action upon their applications for patents for their inventions. They ask no subsidies. They give more than they take. An enlightened public sentiment demands that their requests should be considered with favor by the Congress of the United States.

Respectfully submitted,

CHARLES H. DUELL,  
*Commissioner.*
